#### **PROFILE**

Current role

Software QA Engineer

Languages

JavaScript / TypeScript - Python - HTML - CSS

Frameworks

WebdriverIO – Cypress – Selenium

Certifications

JavaScript Algorithms and Data Structures Responsive Web Design Introduction to Data analysis with Python Managing GIT, GITHUB Fundamental Management

I graduated as an Electronic Engineer from the Autonomous University of Baja California and currently work as a Manual QA Engineer. While I enjoy manual testing for its demand for careful attention to detail, what truly excites me is automation—especially when it enhances efficiency and reliability.

My curiosity led me to explore test automation, and I now spend much of my free time practicing with tools like **WebdriverIO** and **Cypress** using **JavaScript/TypeScript**. I also run tests through **Jenkins** to follow **Cl/CD** best practices. I've recently started learning **Python** with **Selenium** and have been making steady progress.

I'm mostly self-taught when it comes to programming and I've built a solid understanding of **HTML** and **CSS**. I also created an automated **Excel** tool using **VBA** at a previous job to help improve team workflow — a project that sparked my passion for building smarter solutions.

I find it easy to connect with others and build genuine relationships, which helps me contribute to a positive and collaborative team environment. This has shaped my approach to both **teamwork** and **leadership**, and it's something I value deeply in every role I take on.

I'm now seeking an opportunity to grow professionally — where I can continue learning, apply and expand my skills, demonstrate my value, and contribute to a team that values collaboration and continuous improvement.

#### PROFESSIONAL EXPERIENCE

#### Nov 2023 – Actual Position

## Software QA Engineer

Dilato InfoTech, Ensenada Baja California, Mexico.

- End-to-End (E2E) Testing, Regression Testing, Smoke Testing, Functional Testing, Exploratory Testing, Usability Testing.
- Write detailed test cases that describe step-by-step how to validate a feature.
- Create test plans and contribute to QA documentation.
- Document expected results for different inputs and user flows.
- Manually execute test cases by interacting with the application (UI).
- Use various browsers, devices, and configurations to validate functionality.
- Log defects clearly in a bug-tracking system (Jira).
- Work closely with developers, product owners, and automation testers.
- Join sprint meetings, grooming, and planning sessions in Agile teams.

#### Apr 2022 - Nov 2023

#### **Licensing Brand Coordinator**

Mad Engine/Fortune fashions, Ensenada Baja California, Mexico.

- Managed license regulations, ensuring terms such as territories, durations, and usage rights were properly applied and up to date.
- Oversaw product compliance to guarantee licensed garments adhered to brand guidelines and design specifications set by licensors.
- Acted as the main liaison with licensors, coordinating product submissions, approvals, and maintaining clear communication throughout collaborations.
- Collaborated closely with design, production, sales, and marketing teams to ensure alignment with licensing requirements and timelines.
- Ensured all licensed products complied with legal and intellectual property regulations, preventing misuse of trademarks or brand assets.
